Immunization Regis

**Bad VFC Codes**

These shots are appearing here because they are historical (did not deduct from inventory), there is a VFC lot in inventory that matches the lot used o
and the shot record is missing a VFC eligibility code. If the origin of this shot is 'HL7 import', work with your EMR to ensure that they send the correct
forward.

To fix thses shots, go to the patient record, edit the shot, choose the appropriate VFC status code, and change the lot number to choose the inventory

| Lot | Vaccine | Patient | Birth Date | Shot Date | |
|-----|---------|---------|------------|-----------|---|
| 7Y2YE | Rotarix | | | 05/06/2019 | |
| 7Y2YE | Rotarix | | | 05/01/2019 | |
| 7Y2YE | Rotarix | | | 05/02/2019 | HL7 import |
| 7Y2YE | Rotarix | | | 05/02/2019 | HL7 import |
| C5281AA | DAPTACEL | | | 05/08/2019 | HL7 import |

**1.**

To avoid continually fixing these errors providers will need to get the issue resolved by their EMR team so future doses process through accurately

# Example 1

Check inventory determine if you see that lot in I-CARE and if it is a VFC dose or not

| Site: | ████████████████████ | 🔒 121 |
