

# PRESSED PILL SAFETY

**No Matter What A Pill Is Sold As,  
It May Contain Fentanyl, Xylazine,  
Or Something Else**

Pills bought on the street may look like they come from a real company, but this does not mean they are safe. Pills that look similar may not contain the same thing. These pills often also contain multiple substances.

Understanding what is in a pill is important- use **fentanyl and xylazine test strips**. Pills that test positive for xylazine or fentanyl should be discarded. Test each individual pill.

**If someone is experiencing an overdose, call 911 immediately and administer Narcan/naloxone.** Signs of an overdose include slow heart rate, shallow breathing, cold or clammy skin, and falling asleep/losing consciousness.

**Never use alone.** Having someone nearby is important, in case someone experiences an overdose.
